AI Builder | LLM & Automation Developer | Full-Stack Engineer

PROFESSIONAL SUMMARY

Builder-minded junior data scientist and full-stack developer with hands-on experience shipping LLM-integrated products end to end — from API integration to production deployment. Fluent across Python and JavaScript/TypeScript, wiring APIs, databases, and AI models into working tools rather than slide decks. Background in dialogue/agent-style system design, NLP pipelines, automated dashboards, and CI/CD-ready deployment (Docker, Vercel). Drawn to environments that reward shipping over theorizing.

RELEVANT SKILLS

LLM & AI Tooling: LLM API integration (HuggingFace API), NLP, sentiment analysis, dialogue/intent management, prompt-driven feature design, weighted-scoring/algorithmic decisioning

Languages: Python, JavaScript, TypeScript, SQL, C++, Dart

Backend & APIs: FastAPI, Flask, Node.js, REST API design and integration

Frontend / Internal Tools: React, Next.js, TailwindCSS — rapid UI prototyping for user-facing and internal tools

Data & Automation: MySQL, MongoDB, PostgreSQL, Supabase, Excel dashboards, CI/CD-style workflows

Deployment & Security: Docker, Git/GitHub, Vercel, Row-Level Security, encryption, HIPAA/GDPR-aligned design

FEATURED PROJECTS

CEC315AIMODEL — Conversational AI System (Question-Answering & Dialogue Management)

Python, NLP, Chatbot Architecture, FastAPI

- Built a question-answering system with dialogue management logic — intent handling, state tracking, and response generation — the same core pattern underlying multi-step agentic workflows.
- Implemented the full stack solo: FastAPI backend plus an interactive front-end UI, taking the system from model logic to a usable interface in a short build cycle.

Ubuntu_Health (CareTaker) — Healthcare Matching Platform, Full-Stack PWA

Next.js 16, React 19, TypeScript, PostgreSQL, Supabase, TailwindCSS, HuggingFace API

- Integrated the HuggingFace API to run NLP-based sentiment analysis on client reviews, feeding model outputs directly into a live weighted-scoring algorithm — a real example of wiring an LLM/NLP API into a production decision system.
- Architected and shipped a production full-stack PWA solo, live on Vercel, with real-time messaging and geolocation-based matching.
- Built an offline-first architecture (Service Worker caching, IndexedDB queuing) optimized for low-bandwidth environments — under 50MB app size and 100KB initial load.
- Implemented Row-Level Security, encrypted data storage, and HIPAA/GDPR-aligned design, showing attention to production-grade reliability, not just prototypes.

EXPERIENCE

Software Development Intern — Inchtechs

Sep 2025 — Nov 2025

- Built interactive Excel dashboards that automated the translation of raw operational data into decision-ready reports for internal teams.
- Designed and developed an Access Control System (Flask backend, MySQL + MongoDB dual-database architecture), owning the build from requirements through working software.
- Worked directly alongside engineering stakeholders under deadline pressure — gathering requirements, debugging, and shipping iteratively rather than over-planning.

EDUCATION & CERTIFICATIONS

Certified Web Developer (WordPress) — Gogreen Technologies, Buea, Cameroon — May 2025

General Certificate of Examination, Advanced Level (GCE A Level) — Government Bilingual High School, Mbanga, Cameroon — 2025

General Certificate of Examination, Ordinary Level (GCE O Level) — Lycée Bilingue D'Ekorezok, Yaoundé, Cameroon — 2022

LANGUAGES

English — Advanced (Professional Working Proficiency) | French — Intermediate (Conversational Proficiency) | German — Beginner (Basic Understanding)
